

How to Contribute

This documentation is designed to be easy to review and improve.

If you are a clinician or reviewer, you can contribute without installing any tools.

1 Option 1: Report an issue (recommended for feedback)

On any page, use the **Issue / Report an issue** link.

- This opens a GitHub Issue where you can describe the change you want.
- This is best for requests, questions, or feedback that needs discussion.

2 Option 2: Suggest a direct edit in the browser

On any page, use the **Edit** link.

This will open the corresponding source file (a `.qmd` file) on GitHub.

Typical flow:

1. Click **Edit**.
2. Make a small change (typo fix, wording clarification, etc.).
3. GitHub will prompt you to create a **new branch** and open a **Pull Request (PR)**.
4. Submit the PR.

A maintainer will review the PR and merge it when approved.

3 Option 3: Edit locally (for larger changes)

If you are comfortable with developer tools:

1. Clone the repository.
2. Edit `.qmd` files.
3. Preview locally with `quarto preview`.
4. Open a PR.

4 What happens after you contribute

- Proposed changes are reviewed via Pull Requests.
- The public website is published from version tags (e.g. `v0.2.0`) rather than every merge.

5 Tips for making good edits

- Keep changes small and focused.
- Prefer plain language.
- For IFU/safety content: keep wording unambiguous and consistent.

6 Style snippets

6.1 Figure with a standard caption

```
![] (images/example.png){fig-alt="Example image" fig-cap="Figure: Example caption."}
```

6.2 Figure with a margin note (recommended for short callouts)

Use a margin note when you want a small explanation beside the figure (e.g., what to look for).

```
![] (images/example.png){fig-alt="Example image" fig-cap="Figure: Example caption."}
```

```
::: {.column-margin}
```

```
Key point: Describe what to look for in the image.
```

```
:::
```
