1 Intended Use

1.1 Device Description

The OralEye Oral Imaging System is a portable, non-invasive imaging device designed for capturing high-resolution intraoral images using visible and fluorescence imaging modalities.

1.2 Intended Purpose

The OralEye system is intended for:

- Capturing intraoral photographs for diagnostic purposes
- Documenting oral conditions and treatment progress
- Patient education and communication
- Integration with digital patient records

1.3 Intended Patient Population

- **Age Range:** All ages
- **Conditions:** General oral health screening and documentation
- **Contraindications:** None known

1.4 Clinical Benefits

- Enhanced visualization of oral structures
- Improved patient communication
- Comprehensive documentation
- Support for treatment planning

1.5 Indications for Use

The device is indicated for use in dental practice settings for capturing and storing intraoral images to assist in:

1. Clinical examination
2. Diagnosis and treatment planning
3. Patient record documentation
4. Patient education

1.6 Contraindications

There are no known contraindications for use of this device when used as directed.

1.7 Warnings

Warning

- This device is prescription-use only and should be operated by trained dental professionals
- Not intended for use as the sole basis for diagnosis
- Images should be interpreted by qualified dental professionals

1.8 Device Classification

- **Type:** Intraoral camera system
- **Modalities:**
 - Visible light reflectance imaging
 - Fluorescence imaging
- **Portability:** Handheld, battery-operated
